Official Oukitel w3 Kernel 5.1.1.The World Health Organization (WHO) defines autism spectrum disorders (ASD) as neurodevelopmental disorders characterized by impaired social interaction and communication, and repetitive and restrictive behaviours, which may include interests in one or a number of activities or specific objects. In brief, ASD is a developmental disability that affects behaviours and interactions, and significantly impacts a child's ability to participate in his or her community. Of those who have been assessed, approximately three to five per cent of children are likely to be diagnosed with an ASD. The etiology of ASD is poorly understood, and there is no known cure. Studies indicate that in the brain, the levels of receptors and chemicals involved in the transmission of neural impulses are not the same as those found in typical brains, leaving these individuals in a state of constant neurological imbalance. Most children with ASD are on the more severe end of the spectrum c6a93da74d
