

Your Virtual Snowglobe [2021]

Your Virtual Snow Globe is not currently supported by this browser. Please make sure you have Javascript enabled or use a browser that supports virtual reality, and then click below. The experience will work best in Chrome or Safari. Both CHOC Children's and the Pediatric Brain Tumor Foundation are actively working on COVID-19 prevention and response. Each product is being digitally tested for potential COVID-19 contamination in the U.S. and China, and as needed, as part of an internal process to decide on the best course of action with regards to potential threats. The process includes reviewing international data, in addition to our Canadian data. Both organizations are also working on daily cleaning and disinfecting of facilities, equipment and test kits. Both organizations are continuously making modifications to the process to stay ahead of the virus. All exhibitors and attendees are required to wear a facemask while in the virtual space and are asked to wipe down any surfaces prior to, and after, interacting with the product. Every day, we get to work with dreamers like you who are on an epic adventure on their own virtual journey. Even though we have experienced a rare snowfall in January, we are proud to present to you our winter wonderland of a virtual snow globe, affectionately called the Hebo School District Snow Globe or Hebo Schodas if you prefer. It took just over 2 weeks to start from the idea for our live snow globe to it being online to enjoy. We feel like this kind of project is really special because its what we've been wanting to start doing for a long time, especially when we worked on our previous virtual Cloud Adventures. With the love and support of so many people, we are absolutely amazed at what we've been able to do with virtual reality.

Your Virtual Snowglobe

Want to enjoy this virtual snow globe experience? Enjoy this virtual snow globe experience on February 7. This is a link to an iMessage conversation with Jonathan Sherman, LMFT. He will share his expertise and help with any questions you may have. To start the conversation, send the phrase "Replay love and logic" to 55920310. He should receive your message within 24 hours and the full workshop will be on your schedule. Be sure to RSVP. If you cant attend the live chat, we will make it available to you as a recording. Editor's Note: Astronomer Giovanni Covino will host an online showcase of Comet 209P/LINEAR, officially known as C/2019 J2 (LINEAR), from 3 p.m. to 5 p.m. EDT (1900 to 2200 GMT) on Friday, Dec. 7 (opens in a new tab). The webcast, from Covino's Virtual Telescope Project site, will include a deep-sky video (opens in a new tab) and images from a CCD camera-equipped telescope. You can follow the action on a live blog (opens in a new tab), where he will offer a progress report about the comet in real time. We started exploring the idea of a virtual snow globe in late 2017. The goal was to build a fully interactive globe that you could move around and manipulate. With that in mind, we started building a suite of tools using Node.js and the electron software development kit (SDK). The great thing about electron is that it's javascript-based, so it was pretty easy to build a highly interactive globe based on the web, native for the iPhone and iPad, and desktop for MacOS and Linux. The views from the dome range from modest (40 by 70 feet) to huge (200 by 200 feet), so you'll get to scope the scene from a unique perspective. If you're not sure which degree of magnification you'd like, simply click on your mouse. The 360-degree view starts 30 miles from the dome, with larger virtual telescopes displaying a model of the planet Earth. The object is zooming toward you and spinning around so you can look in any direction you want. 5ec8ef588b
