I don't know why people think you need to take a photo and edit it in Photoshop if you don't want to. Save some money and buy either Adobe Photoshop Lightroom Classic CC or Adobe Photoshop Creative Cloud instead of Photoshop. It's a powerful photo editing program, but it's also six to 10 times the size of Adobe Photoshop Lightroom Classic CC or Adobe Photoshop Creative Cloud , so it's not for the faint of heart or purse. Also, the number of features it has is staggering: 12,000+ original features developed by engineers, designers, and artists over half a century, including more than 100 new ones in the last five years alone, and access to scores of additional features through the Adobe Creative Cloud subscription edition .

The Adobe Creative Cloud Plan is a very low-cost ($10.99/month for 25GB of online storage, or $79.99 per year), online-only subscription program that gives you access to all the latest features of Adobe Photoshop and Adobe Lightroom, as well as free upgrades for the first year, and allows for unlimited use of the software for a set term. There are over 50 languages included for Photoshop and Lightroom at this sub-penny price, and the subscription is not a one-off purchase. Photoshop and Lightroom is *always* current: current releases of Photoshop and Lightroom are available for free every few months, and updates and paid features are added every week.

Now Lightroom puts the Macman in Macman, so what more can I say? The program does what it's designed to do very well and it is a joy to use. It is the best-kept secret amongst the Macman users. The Adobe Lightroom 4 is a nice start, but coming from the Adobe Photoshop CC version, the new Lightroom 5 beginners will be surprised to see all the transformations of the image editing software. Even though Lightroom 4 is already the best product out there, newer updates make it more attractive. Anyone who is willing to learn it will be able to face any problem and it is highly recommended.
